

Spectacle Options For All Your Patient Needs!

Our standard lenses are CR-39 and our five standard frames combine style with durability, offering spring hinges and full adjustability. Each pair of glasses comes with a soft case and temple tag with the power clearly marked.

Prismatic Spectacles

- +4.00 to +14.00 in all five frames, custom orders also available
- Beveled with up to two-thirds of the lens thickness on the front surface
- Design allows for image clarity and comfortable distances between the lenses, nose and cheeks, balancing comfort and functionality with superior optical quality
- Adequate prism to reduce eye fatigue and help users comfortably maintain binocularity for extended periods by helping the user properly converge images
- Designed to work for a wide range of different pupillary distances to prevent double vision or eye suppression

Microscopic Spectacles

- We cut and mount Coil lenses from +16.00 to +48.00
- By controlling the cutting/mounting process, we ensure the highest level of quality
- Ideal for aphakic patients and individuals with extreme magnification needs who cannot be adequately corrected with standard lenses

Full Eye Frame
size 44-18-140
B Measure: 40mm

Spherical Spectacles

- Powers are available from +4.00 to +14.00
- Excellent choice when function is the priority – particularly for monocular patients or those who alternate fixation between eyes – and when they do not require additional prism for binocularity
- Select a spherical reader when the required power is +14 diopter or less and when the patient's preferred retinal locus is positioned outside of the effective viewing area of the comparable aspheric lenticular lens

Aspheric Spectacles

- Powers are available from +6.00 to +20.00
- Select an aspheric lenticular reader when the patient's preferred retinal locus can be positioned within the effective viewing area of the lens
- Feature a plano-convex design which reduces lens thickness and weight
- Lenticular design allows the user to maintain a better awareness of their surroundings

Pewter Frame
size 47-20-140
B Measure: 29mm

Custom Rx Available

- Our lab can custom make most anything your patients need
- We can also use patient frames if they already have something they love
